Recommendations (optional): In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

There are multiple controls that need to be implemented to improve Botium Toys security posture in order to better ensure the confidentiality of sensitive information. First least privilege, as well as disaster recovery plans, up to date password policies that adhere to current regulations, separation of duties, an IDS to be able to react to security breaches, ongoing legacy system management, encryption, and finally a password management system to quicken productivity when employees/vendors submit a ticket to the IT department to recover or reset a password/s.

To address Botium Toys gaps in compliance, they will need to implement controls such as separation of duties, least privilege, and encryption. The company will also need to properly classify their assets, in order to identify additional controls that need to be implemented to improve their security and protect sensitive information.
